About

Full-stack Engineer with **2+ years of hands-on experience** building SaaS, desktop, and real-time systems using **Django**, **FastAPI**, **Spring Boot**, **React**, **TypeScript**, and relational/NoSQL databases. Comfortable owning backend APIs, frontend integration, and AI-assisted development workflows, including local RAG features with embeddings, vector search, and Ollama-based generation.

Technical Skills

Languages:	Python, TypeScript, JavaScript, SQL, Java, C#.
Backend:	Django, FastAPI, Spring Boot, .NET, REST APIs, WebSocket (Django Channels).
Frontend:	React, TypeScript, Tauri (desktop).
Databases:	PostgreSQL, MySQL, MongoDB, Redis, ClickHouse, ScyllaDB, Aerospike.
Cloud & Storage:	Amazon S3, Cloudflare R2, Cloudflare Turnstile, Firebase Admin.
Search:	Typesense.
AI & Local AI:	RAG, Embeddings, ONNX Runtime, LanceDB, Ollama, Google GenAI.
Tools:	Docker, Git, Temporal, Celery.

Work Experience

Fullstack Developer, CHEK JSC

Oct 2024 – Present

- Built features for a **multi-tenant SaaS platform** covering workspace, CRM, CDP, campaigns, loyalty, gamification, and task-management workflows.
- Implemented **Napas VietQR** QR-code generation for bank transfers and merchant payment flows across tenant workflows.
- Implemented **ClickHouse**-backed leaderboard analytics for loyalty and gamification workflows, supporting point accumulation, ranking, and user performance tracking.
- Developed a **cloud-backed drive service** using **Amazon S3** and **Cloudflare R2**, supporting file uploads, metadata tracking, access control, and delivery.
- Integrated **Cloudflare Turnstile** to strengthen bot protection, error visibility, and operational debugging.
- Delivered a local **RAG-based AI assistant** for the Tauri desktop app using ONNX Runtime, LanceDB, and Ollama for embeddings, vector search, and contextual responses.
- Connected **local-AI** backend with the React desktop UI and added smoke checks for embedding quality, vector-store health, and local chat execution.
- Integrated **Aerospike** as a high-performance key-value store for real-time session and caching workloads across tenant services.
- Orchestrated long-running background workflows using **Temporal**, covering onboarding, notification dispatch, and data sync pipelines.
- Implemented full-text search across platform entities (contacts, products, orders) using **Typesense** with real-time indexing and multi-tenant filtering.
- Integrated **Firebase Admin** for push notification delivery to mobile and web clients across tenant workflows.
- Built real-time features using **WebSocket** (Django Channels) for live data streaming and event-driven communication between clients and backend services.

Personal Projects

LMS System

2024 – 2025

github.com/syminh273-wq/LMS_SYSTEM

- Built a **Learning Management System** REST API covering classroom management, student enrollment, assignment delivery, and real-time progress tracking using **Django** and **Cassandra** .
- Implemented **real-time chat** with **WebSocket** for live classroom communication between instructors and students.
- Integrated **face recognition proctoring** to verify student identity during online exams, reducing cheating risk.
- Built a **React + TypeScript** frontend with role-based dashboards for admin, instructor, and student workflows.
